

**You can never have too much of a good thing.** Blood vessel contraction and expansion, the secretion of hormones and enzymes, sending messages through the nervous system and of course healthy bones; what do all these things have in common? Calcium: the most abundant mineral in the human body and now Calcium is easier for your body to get than every before, with CAL.

#### **Saving is better than Spending.**

Most of the Calcium in your body is stored in the bones and teeth where it supports their structure. The rest is found throughout the body in the blood, muscles, and the fluid between cells. Every day your bodies withdraws small amounts from your bones to support the normal function of your body systems. If you don't get enough calcium, you could be withdrawing more than you are depositing. CAL makes sure that you are taking in more than you are giving out.

#### **Just the right Amount**

Just like a sponge your body can only absorb so much at one time. This is true with Calcium supplements. Studies have shown that 500 mg taken twice a day is the proper way to replenish your body. Any more than that gets wasted. CAL has been specially formulated with these limits in mind.\*
